**DESCRIPTION**

P2782 is a microprofile transformer with one centre-tapped winding for applications where high performance and safety isolation to international standards are required in an extremely small case size.

Designed specifically as a surface mount device, the P2782 features a 7mm seated height and is vacuum encapsulated and tested to 6500VDC. The part is compliant with RoHS Directive 2002/95/EC, and suitable for lead-free and conventional placement and reflow.

Despite the subminiature size, the performance is the equal of that of much larger components. The P2782 offers reinforced insulation, is ideal for voice telecommunications and for data communications to V.22bis (2,400 bits/second), and can be matched to both 600Ω and complex impedance telephone lines.

At moderate transmit power levels (e.g. -10dBm) performance to V.32bis may be achieved.

In instrumentation applications, the P2782 offers a wideband frequency response from 50Hz to 40kHz.

P2782 is certified to IEC 60950 and UL 60950. P2782 is a UL Recognized Component, and is supported an IEC CB Test Certificate.

**Notes**

1. Third harmonic typically exceeds other harmonics by 20dB.
2. Components 100% tested at 6.5 kVDC.
3. **Caution:** do not pass DC through windings. Telephone line current, etc. must be diverted using choke or semiconductor line hold circuit.
4. At signal levels greater than 100mV,  $L_p$  will increase and  $R_p$  will decrease slightly but the effect is usually favourable to the return loss characteristic.
5. Resistance imbalance between the two halves of the tapped winding will not be greater than  $7\Omega$ .
6. Excludes shipping materials. Components are dry-packed and sealed as shipped. Handle in accordance with IPC/JEDEC J-STD-033 procedure for components classified as IPC/JEDEC J-STD-020 Moisture Sensitivity Level 5a.

**PERFORMANCE**

**600Ω MATCH**

Frequency response driven by terminal equipment (voltage source with 430Ω series resistance) measured across 600Ω is within ±0.2dB 200Hz to 4kHz

**Note:**  
To obtain harmonic distortion power in dBm, add fundamental power in dBm to third harmonic in dBc e.g. at -10dBm power in line at 450Hz, third harmonic power is -10 + (-74) = -84dBm typical.

**EUROPEAN CTR21 COMPLEX MATCH**

The circuit of Fig. 6 gives good TX and RX flatness (±0.3dBm 200Hz - 4kHz). An alternative arrangement, using existing PCB sites, is shown in Fig. 7. Note, however, that TX flatness will be degraded with the topology.

**CONSTRUCTION**

Dimensions shown are in millimetres (inches).  
 Geometric centres of outline and pad grid coincide within a tolerance circle of  $0.3\text{mm}\varnothing$ .
