**DESCRIPTION**

P3146 is intended for V.90 and V.92 (56kbps) modems and other high-speed applications where ultra-low distortion at high power levels and very low voiceband frequencies is required.

P3146 is mechanically compatible with industry standard P1200 and P2001.

P3146 has extended flat frequency response from 30Hz to 4kHz with very low levels of signal distortion at signal frequencies as low as 150Hz.

P3146 also exhibits stable characteristics over its operating temperature range to maximize data throughput under varying environmental conditions without the need for modem retraining.

P3146 meets international safety standards, being vacuum encapsulated and 100% tested to withstand 6.5kV.

P3146 is certified to IEC 950, EN 60950, UL1950 and EN 41003. P3146 is a UL Recognized Component and is supported by a BAPT Certificate of Recognition, a CSA Certificate of Compliance and an IEC CB Test Certificate.

### Notes

1. Third harmonic typically exceeds other harmonics by 10dB.
2. Components are 100% tested at 6.5kV DC.
3. Caution: do not pass DC through windings. Telephone line current, etc. must be diverted using semiconductor line hold circuit.
4. At signal levels greater than -20dBm, L<sub>p</sub> will increase and R<sub>p</sub> will decrease slightly but the effect is usually favourable to the return loss characteristic.
