**DESCRIPTION**

P3304 is intended for voice applications where good distortion at moderate power levels is required with low insertion loss.

P3304 uses patented design and construction methods to achieve excellent signal performance and safety isolation to international standards. P3304 is certified to IEC 950 and UL 60950. P3304 is a UL Recognized Component, and is supported by an IEC CB Test Certificate. The part is completely lead-free, compliant with RoHS Directive 2002/95/EC, and suitable for lead-free and conventional processing.

P3304 has exceptionally flat frequency response from 100Hz to 10kHz, a 3dB bandwidth of typically 90kHz and requires only the very simplest of matching to achieve good return loss and transhybrid loss across the voiceband, with low levels of signal distortion at signal frequencies as low as 200Hz.

P3304 has very low leakage inductance and winding resistances and is designed for use with 3.3V Legerity QSLAC devices. For 5V devices use P3303 (1:1 ratio).

P3304 has been subjected to relevant environmental testing according to IEC 68 and Combined Environmental Reliability Testing (CERT) beyond normal operational levels and passed all tests, remaining fully functional.

#### Notes:

1. Third harmonic typically exceeds other harmonics by 10dB.
2. Components are 100% tested at 3.25kVDC.
3. Caution: do not pass DC through windings. Telephone line current must be diverted using semiconductor line hold circuit or choke.
4. At signal levels greater than 100mV,  $L_p$  will increase and  $R_p$  will decrease slightly but the effect is usually favourable to the return loss characteristic.
5. Ratio is exact. For 1:1 version use P3303.

**MATCHING RECOMMENDATIONS**

TXA1/TXA2 represent low impedance transmit outputs. RXA represents a high impedance receive input. Transhybrid loss in specification table assumes TXA1 and TXA2 are balanced outputs. Other hybrid arrangements are possible.

**CONSTRUCTION**

Dimensions shown are in millimetres (inches).  
Geometric centres of outline and pin grid coincide within a tolerance circle of 0.6mm $\varnothing$ .  
Observe correct orientation in circuit.  
Total weight typically 7g.
